CO₂ Enhanced Coalbed Methane Recovery Potential for Major Coals in the Illinois Basin
Midwest Geological Sequestration Consortium
December, 2005

This map illustrates a regional conceptual model of the geological setting of Illinois to focus further work, and it is not intended to be definitive. The information presented in this map may not reflect the total potential of all coal resources in Illinois. Use of this document does not indicate the merits for or against the use of enhanced coalbed methane recovery. The information presented in this map is provided by the Midwest Geological Sequestration Consortium (MGSC) in the U.S. Department of Energy, Office of Coal Resources, Assistant Secretary for Fossil Energy, and is not representative of any endorsement of the MGSC by the U.S. Department of Energy. The U.S. Government assumes no liability for the use of the information presented here. This map was prepared as an end result of work sponsored by the U.S. Department of Energy. Opinions, findings, and conclusions or recommendations expressed in this map are those of the authors and do not necessarily reflect the views of the U.S. Government.

The U.S. Government assumes no liability for the use of the information presented here.

The information presented in this map may not be reproduced in any form (except by permission of the Midwest Geological Sequestration Consortium) without the permission of the U.S. Government.

The Midwest Geological Sequestration Consortium is funded by the U.S. Department of Energy (through the Carbon Sequestration Laboratory Implementation and Testing (CSLIT) via the Regional Carbon Sequestration Partnership Program (project number DE-FC26-05NT41994)), and by a cost share agreement with the Illinois Department of Commerce and Economic Opportunity (Office of Coal Development's project number 12E023 9817 000).
